Professional Summary

First-year Computer Science and Engineering student with hands-on experience developing AI- and IoT-based solutions for precision agriculture and health monitoring. Demonstrates practical knowledge of embedded systems, automation, and applied machine learning, with technical proficiency in Python, C++, ESP32, Blynk IoT Platform, and FlutterFlow. Seeking internship or project opportunities in AI/IoT-driven software development to apply technical skills, contribute to innovative solutions, and continue building expertise in intelligent automation and connected systems.

Education

Shri Venkateshwara College of Engineering 2nd Year
B.E. - Computer Science and Engineering

- CGPA: 9.4 / 10

Technical Skills

- **Programming Languages:** C++, Python
- **Web Technologies:** HTML, CSS, JavaScript
- **Databases:** Supabase, MySQL, MongoDB
- **Core Areas:** Data Structures & Algorithms (DSA), Programming Fundamentals, Artificial Intelligence (foundational), Internet of Things (IoT)
- **AI-Assisted Development:** Vibe Coding
- **Deployment:** Render, Vercel
- **Tools & Technologies:** Git, GitHub, Git Bash, Visual Studio Code, FlutterFlow, Blynk IoT Platform, ESP32

Certifications

- **Interview Preparation Job Simulation** - Forage | Completed August 24, 2026
- **Python Foundation Certification** - Onwingspan | Issued August 17, 2026

Projects

AI-Based Smart Pesticide Spraying Nozzle

- Developing an AI-powered smart nozzle system that identifies crop areas requiring pesticide treatment and sprays only the necessary amount.
- Designing intelligent decision-making and automated control to improve pesticide-use efficiency while reducing chemical waste and environmental impact.
- Building the system with FlutterFlow for the app interface, Blynk IoT for device connectivity and control, and ESP32 for microcontroller hardware.

MediTrack - Elderly Health Monitoring Application

- Developing a health-management application that helps older adults and caregivers organize and monitor essential health information.
- Building a simple, user-focused interface to make routine health tracking more accessible, structured, and convenient.
- Organizing core health information for easier access to essential records.

Smartwatch Integration with MediTrack

- Integrating a smartwatch with MediTrack to collect health readings such as blood pressure and oxygen-level data.
- Connecting wearable data to the application for easier monitoring and review within the app's health-management features.
- Designing the integration to make wearable readings available within the app for convenient monitoring and review.

Arena Hub

- Developing a centralized digital platform that brings arena-related information and user interactions together in one application.
- Applying software-development and interface-design concepts to create an organized, user-friendly experience for exploring arena information and services.
- Structuring the platform's features to improve navigation and provide seamless access to arena information and services.

Achievements

- **Smart India Hackathon (SIH) - Internal Hackathon:** Selected in the internal selection round for SIH26027, 2026.
- **IDTL Projects - College Level:** Secured second prize at the department level for innovative project work.
- **Integrated Selective Excellence Program (ISEP):** Selected for and successfully completed the college program, gaining exposure to advanced learning modules and collaborative skill development.
- **Placement Activity Coordinator - College:** Coordinated placement activities for seniors, assisting with aptitude-test invigilation and interview processes.
